MODEL HD-DO | SEAL-LESS

PG 3.5 IMMERSIBLE CENTRIFUGAL PUMPS

APPLICATIONS

For all transport or circulation duties of corrosive liquids, that may contain even high amount of particles or sludge with medium viscosity.

This series of pumps is equipped with a state of the art semi-open impeller that is fixed onto the shaft independent from the direction of rotation.

MATERIALS

Standard is the material PP that covers a very wide range of duties.

For highly abrasive liquids (high percentage of solids), at special order, impellers or housing parts of High Modulus Polyethylene (**HMPE**) are available.

For highly corrosive mixtures of acids at higher temperatures even a pump housing entirely made of virgin **PVDF** is available.

TECHNICAL DETAILS PUMPS

Design pressure	PN6 - PN10 speed related
Max. system pressure	not applicable; "open system"
Min. flow	1 m ³ /h
Max. flow	300 m ³ /h
Max. head	80 m
Max. viscosity	250 mPas
Max. solid size	3-5 mm depending on type
Max. solid size	3 mm

TECHNICAL DETAILS MOTORS

Standard	Three-phase, multivoltage, TEFC
Efficiency level < 7,5 kW	IE2 acc. IEC60034-30
Efficiency level > 5,5 kW	IE3 acc. IEC60034-30
Duty	Continuous duty: S1
Multi Voltage	220-240/380-415V 50 Hz // 440-460 V 60 Hz
Protection class	IP55 (IEC 34-5/ NEN-EN 60034-5)
Insulation Class	"F" ($\Delta T=80^{\circ}C$);
Max. ambient temperature	-30 to 40°C, at 1000 m.a.s.l.
Max. relative humidity	< 95%

OPTIONAL AVAILABLE

Other voltages	f.i. 480 V/ 3 Ph/ 60 Hz
Other insulation	f.i. Tropicalized
PTC Thermistors	on windings
Thermal or dust protection:	IP56, IP65, IP66, IPW56, IPW65 or IPW66

FEATURES

Standard provided with DIN2501 PN10 flange. Options:

- ANSI flanges
- Model BB for out of tank

Labyrinth prevents fumes from the pump to exit into the atmosphere when the pump is operating:

- less motor corrosion
- better atmosphere around the pump

Optional:

unique gas seal available for extremely corrosive or dangerous liquids

Motor optimized to run under tough conditions.

Ventilation chamber protects motor shaft, bearing shields and bearings against corrosive fumes

Semi-open impeller type:

- direction independent fixation
- for transfer and circulation
- increased efficiency = less energy consumption
- special impellers available for low flow – high head applications
- very smooth and quiet
- air free operation, even at very low liquid level
- anti-clogging

Extra heavy duty lock nut for secure impeller fixation.

Solid pump housing. Available in other wear resistant materials.

Screwed suction pipe. Standard with large surface suction strainer. Suction pipe extensions available.

OPTIONS

SUCTION PIPE

ARBO offers suction pipe extension up to a total immersible length of 3 mtr.

Extended suction pipes are split into sections of 1.2 mtr. maximum for easy transport.

It is recommended to support long suction pipes to the sump wall, however these supports need some flexibility and should not cause vibration.

FOOTVALVE (FOR CLEAN SOLUTIONS ONLY)

If starting at any level is requested, ARBO offers a very reliable corrosion resistant foot valve to maintain the liquid level inside the pump housing.

Filled once, the pump is able to start again even though the liquid level in the sump is below the impeller housing.

Model D0-D Float mounted sump pump

Model BB with full options

FILTER CHAMBERS
For cartridges, discs or bag filters.
Capacity to 40 m³/h
Can be combined with any ARBO pump
Filter rates of 0,2 to 1200 micron

OIL SKIMMERS
Capacity 0 - 4 l/h
Length 400 - 3000 mm
Max. 70°C

ARBO PUMPS | FILTERS

Since the foundation in 1954, **ARBO** Pumps | Filters specialized on the design and production of sustainable, highly reliable and corrosion resistant thermoplastic pumps and filters.

ARBO Pumps offer a remarkably longer life span and lower maintenance cost thanks to its ridged construction and solid material design.

With a team of experienced engineers, production- and sales staff, **ARBO** Pumps | Filters services a wide customer base and a wide range of duties through a worldwide distribution network of pump specialists.

We also deliver products corresponding to ATEX regulations.

PG 3.5 IMMERSIBLE CENTRIFUGAL PUMPS

SEALLESS

**COMPACT CONSTRUCTION
UP TO 300 M3/H**

In this series the pump is directly mounted onto the motor flange by means of a plastic bracket.

**LONG COUPLED CONSTRUCTION
UP TO 40 M3/H**

A number of models are available with bearing housing between the pump and the electric motor. Thanks to this construction it is possible to work without a foot bearing and makes it possible to mount longer pump shafts. This results in a lower minimum starting level in the tank.

MODEL BB:

Every ARBO immersible pump can be supplied in an "Out of tank" construction. The main advantage is the dry erection of the pump in situations where there is insufficient mounting space in the tank.
